Task#2

## Rima Ali Alghamdi

In this task I used the *Prophet* library to predict the number of views of the next two months. As shown in the following plot graph, the number of views are expected to get lower by time, with extremely low numbers in some days.

Two additional graphs are used to display the behavior, the first one '*trend'*, which shows that the trend –number of views here– is dropping down, the second graph '*weekly'* shows the behavior in the weekdays, as we can see, number of views are in their lowest during Saturdays and Sundays –end and beginning of every week–.
